No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Q9wts8

"DNA sequence comparison between two tissue-specific variants of the autonomous parvovirus, minute virus of mice.";
Nucleic Acids Res. 13:3617-333(1985).
-: FUNCTION: Seems necessary for viral DNA replication.
-: SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

J. Gen. Virol. 72:867-875(1991).
-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                         Virology 183:195-205(1991).
-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Construction and nucleotide sequence analysis of an infectious DNA
                                                                                                                             "Mapping specific functions in the capsid structure of canine
parvovirus and feline panleukopenia virus using infectious plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-91202123; PubMed-2016597;

Carlson J., Rushlow K., Maxwell I., Maxwell F., Winston S., Hahn W.;
"Cloning and sequence of DNA encoding structural proteins of the
autonomous parvovirus feline panleukopenia virus.";
J. Virol. 55:574-587(1985).
-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Martyn J.C., Davidson B.E., Studdert M.J.;

Submitted (NG-1990) to the EMBL/GenBank/DDBJ databases.
-i- FUNCTION: Geems necessary for viral DNA replication.
-i- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE-88062992; PubMed-2824850;

Bergeron J., Hebert B., Tijssen P.;
Identification of the Allotropic determinant and comparison with those of NADL-2 and field isolates.";
J. Virol. 70:2508-2518(1996).
-!- FUNCTION: Seems necessary for viral DNA replication.
-!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Nucleotide sequence and genomic organization of Aleutian mink disease parvovirus (ADV): sequence comparisons between a nonpathogenic and a pathogenic strain of ADV."; J. Virol. 62:2903-2915(1988): -i- FUNCTION: Seems necessary for viral DNA replication.
-i- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 17004, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

RIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 17004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ij

3 Sequence 28671, Application US/09252991A

3 Patent No. 6551795

4 TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

5 TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

5 TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

6 CURRENT APPLICATION NUMBER: US/09/252,991A

7 CURRENT FILING DATE: 1998-02-18

7 PRIOR APPLICATION NUMBER: US 60/094,190

7 PRIOR APPLICATION NUMBER: US 60/094,190

7 PRIOR PILING DATE: 1998-07-27

8 NUMBER OF SEQ ID NOS: 33142

8 SEQ ID NO 28671

8 LENGTH: 276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 42; DB 4; Length 276;

Sequence 12444, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PREDMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT PELING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR SEQ ID NOS: 14342
SEQ ID NO 12444
LENGTH: 710

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Original source text: Minute virus of mice (strain MVM(p)), passed in mouse 1 (variant A-9) cells.

The parvoviridae family cantains two groups that infect mammalian hosts: (i) defective (helper-dependent) adeno-associated viruses, and (ii) autonomous (helper-independent) parvoviruses. MVM is a member of the latter group. Both groups have been demonstrated to package both plus and minus strands (in separate particles) of the sp. DNA genome, though the minus strand is more typically packaged in the latter group.

The sequence below corresponds to the plus (+) strand, also referred to as the C-strand. The minus (-) strand is also referred to as the V-strand.

The 3' and 5' termini both exhibit the potential for forming stable (foll-back) hairpins; these sequences appear to play a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                replication [1].

The left and right halves of the genome encode two distinct, but overlapping transcriptional units. The transcripts can be summarized [1] (1 map unit (mu) = 51 bp):

R1 (4.8 kb): 4.5 mu - 46 mu; 46+ mu - 95 mu
R2 (3.3 kb): 4.5 mu - 10.7 mu; 38 mu - 46 mu; 46+ mu - 95 mu
R3 (3.0 kb): 40 mu - 10.7 mu; 38 mu - 46 mu; 46+ mu - 95 mu
R3 is the major transcript.

There are two major open reading frames, both on the plus (or C) strand. The left side ORF (261-2279) probably encodes a non-capsid protein of 85 kd; the right side ORF probably encodes the viral capsid proteins, VP1 (or A, 83 kd). VP2 (or B, 64 kd), and VP3 (or C, 61 kd). But because of uncertainties about the precise splice points in the transcripts, the exact starts, stops and (possible) intron boundaries are not known.
